*All the best of new and old
in all the flower kingdom*

Seeds • Bulbs • Plants

RED RICHES Petunia

The first and only bright scarlet red, all double Petunia ever created, and what is more, it is in the new All Double Multiflora Class.

Red Riches is a masterpiece in plant breeding, a combination of the most wanted attributes a Petunia can have. Bright red color, full double fluffy form, Multiflora type with plenty of bloom and dwarf, mound-like habit.

We believe that Red Riches is the novelty of 1960 and for years to come, for to see it is to want it. You'll be "rich" in gardening pleasure with Park's Red Riches Petunia.

1565—RED RICHES. Pkt. 100 seeds \$1.00; 3 Pkts. \$2.50—Limited Supply.

1565A RED RICHES #2—Identical with Red Riches, but $\frac{1}{2}$ the plants produce double flowers, $\frac{1}{2}$ produce single. Production of this strain was good, and we have plenty of seed. Pkt. 100 s. 50c; 200 s. \$1.00; 500 s. \$2.00; 1/128 oz. \$5.50.

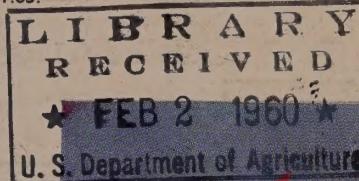

JEWELITE Fibrous Rooted Begonia Seed Grown, Dark Leaved, Double

Here are the most pleasing color combinations in all the Floral Kingdom. Each glowing color is displayed to perfection against the waxy deep bronze-red of the "Jewel Case" foliage. Colors range from deep scarlet red through rose-red, to light rose-pink, with some of the most beautiful rose shades ever seen in Begonias ranged between.

Flower form varies from full-double like a rose, to Anemone type with a large crest where the petal color is interspersed with yellow, others are loosely double for a Carnation type flower; while about 25% will be single. Every plant, including the singles, have the harmonious dark foliage and lovely colors.

Delightful as a house plant; nothing nicer as a shady border. Jewelite gives you seed for all the plants you want at less than the cost of one ready grown plant.

0312—JEWELITE. Pkt. 50c; 3 pkts. \$1.35.

FANTASIA DOUBLE GERBERA from India

Most Beautiful of Cut Flowers

We have trialed seeds from an Indian Horticulturist, for two years, and found that they produce 50% double flowering plants, the remaining 50% being very choice single varieties. The color range is magnificent; clear sparkling rose, pink, crimson, scarlet, yellow, white, cream and many shades in between.

By special arrangement with our Indian friend, we proudly offer the gardeners of America this outstanding novelty.

0863—FANTASIA DOUBLE. 20 seed 50c; 60 seed \$1.35; 100 s. \$2.00.

(1) ROCKET SNAPDRAGONS

ALL-AMERICA SELECTION

F₁ Hybrid, Home Garden Type.

For the first time in the history of the All Americas an entire class of six varieties and mixture receives an All America Award.

The Rocket Series are the finest F₁ Hybrid Snapdragons purposely bred for garden use and hot weather tolerance. They culminate a breeding project which provided the Ginger Snaps (Panorama), which until now, were the finest home garden Snapdragons. The Rocket Snaps are the most vigorous of all, being F₁ hybrids, they are absolutely uniform, providing Snapdragon perfection for the home.

The Rockets grow 30 to 36" tall, producing long spikes with many closely spaced florets; ideal for garden decoration or for use as cut flowers. Heat resistant, they bloom magnificently in midsummer, then cut back to 8", they will bloom even more beautifully again in the fall.

0105—ROSE ROCKET. Refreshing medium rose with faint yellow lip. A lovely favorite color.

0106—GOLDEN ROCKET. Bright yellow with a white throat. The brightest of the group.

0104—RED ROCKET. Top winner with silver medal. Foliage and stems are dark reddish green, and flowers are rich, velvety crimson-red.

103A—BRONZE ROCKET. Rich bronzy orange.

105A—WHITE ROCKET. Pure ivory white.

102A—ORCHID ROCKET. Rosy lavender, yellow lips.

(3) ASTER DUCHESSE

PURE YELLOW. New this year. It is outstanding in two ways: the strain and the color. It is the first giant flowered, wilt resistant pure yellow Aster and the first of an entirely new type. Duchesse Strain is very vigorous, grows 24 inches tall; with long strong stems and deep brilliant green foliage. The large, globe-shaped flowers measure 4½-5 inches in diameter, with incurved petals and resemble giant flowered Japanese or Football Mums. It blooms from September thru frost and is exceptionally good for cutting, since it will last 15 days in water. 100% resistant to wilt and in a general way much healthier in every respect than any other Aster.

Bred by an exceptional French Hybridist, we're pleased to offer it now for the first time.

0210—PURE YELLOW. Pkt. 35c; 3 Pkts. \$1.00.

(4) STRAWFLOWER, Helichrysum

Unexcelled for Winter Bouquets

PARK'S SPECIAL STRAWFLOWER BLEND is not new, but so much in the fashion spotlight, that we want to emphasize it here. Very beautiful, large double flowers are freely produced all summer on vigorous 30" plants. They start readily from seeds, and are of easiest culture, growing well in any good garden soil and blooming freely and continuously. Showy in beds, one of the best for drying, and popular too for fresh cut flowers. This is a very fine, improved strain. The blend of colors includes red, yellow, rose, crimson, salmon, sulphur, white and many unusual bright blends found in no other flower.

0966—BLEND. Pkt. 25c; 2 Pkts. 45c; 1/2 oz. \$1.00.

(6) NEW CREEPING PERIWINKLE

A Plant with a Destiny

NEW VINCA ROSE CARPET has a distinct, creeping habit, which is the key to new usefulness for this delightful family. Only 4-6" high, it covers a 2 ft. circle of ground. Rose Carpet is shade tolerant, heat loving and ideal for carpeting a garden or lawn area, making a low bed, or hanging over a garden wall. At its best with waxy leaves, cool and shining during hottest summer, when other plants parch, it bears rose colored 1½" blooms in great profusion from early summer until frost.

Giant Pansies

A Park Specialty

The Pansy is one of our most useful, best known flowers. Blooming long before less hardy annuals, Pansies are at their gay, colorful best, during the cool of very early spring, in beds or low borders. So hardy, their foliage remains green and attractive all winter. Our comparative trials assure us that Park's Pansies cannot be surpassed, regardless of claim or price. Easily grown.

Engelman's Giants

Seeds we offer are direct from Mr. Engelman. This strain is particularly noted for its heavy texture and very strong stems which enable it to hold up better during hot weather than any other strain. Flowers are of giant proportions and the color range is complete tending toward the brighter colors, many being penciled or veined giving a striking and different effect.

F₁ Hybrid Petunias

Bring a New Era in Home Beautification

So dependable you can paint your garden scene with them, assured it will be just as you planned, remaining that way all season.

WHAT ARE F₁ HYBRIDS?

F₁ Hybrids are produced by carefully hand crossing individual blooms from two selected inbred parents which in turn were especially developed for the superior qualities they impart to the cross.

THESE SUPERIOR QUALITIES ARE:

GREATER VIGOR. Faster, stronger growth, quicker bloom, larger flowers, brighter colors and heat resistance to carry through the summer in good condition.

GREATER PRODUCTION. More plant—More Flowers.

GREATER UNIFORMITY. Flower color and plant habit show almost no variation, so you can be sure of the result.

NEW COLORS. Are offered here which were not possible except as F₁ Hybrids.

MOST MODERN. An F₁ Hybrid Petunia has won an All America Award almost every year since 1952. F₁ Hybrids represent a great advance in Floriculture, perhaps the most significant of our generation.

For more carefree gardening, easier, more luxurious living, plant Free Blooming F₁ Hybrid Petunias.

SELECTING AND SOWING

If you wish seeds to sow in a garden bed or to present to children, or if you have had but little experience in raising flowers from seeds, select such flowers as Alyssum, Aster, Balsams, Cosmos, Calendula, Candytuft, Oriental Pinks, Gillardia, Helianthus, Marigold, Mignonette, Bedding Petunia, Pansy, Phlox, Ricinus, Scabiosa, Nasturtium, Valeriana, Verbena and Zinnia; for vines get Cobaea, Cypress, Dolichos, Gourds, Morning Glory, Thunbergia. Even in sowing these, it is well to prepare the bed carefully in a sunny exposure; place a low board frame around it and after sowing, water and cover with a newspaper until plants appear. If you sow seeds in the open with full exposure to rain, wind and sun, you should not complain if few of the seeds become plants.

TO INSURE SUCCESS. Many failures with seeds are due to lack of knowledge of the time required by the seeds to germinate. Study the table on pages 66 and 67 to avoid failures from this cause. Follow instructions in the "Gardener's Handbook." Sent Free on request with any order.

HEAT RESISTANT SWEET PEAS

Are Sweet Peas Hard to Grow in Your Climate?—Here's The Answer.

Cuthbertson's Floribunda

Not only do they continue blooming long after hot weather has come and other sweet peas have died, but they begin blooming two weeks ahead of the Standard Spencers. The flowers are of the true Spencer Orchid Flowering type with long stems and wavy petals. Large and deliciously fragrant, they are produced in great quantity on plants of exceptional vigor. The colors are bright and clear. If you grow only one strain of Sweet Peas this is the most practical.

2003—LOIS. Rose pink on white ground.

2004—JIMMY. Best scarlet variety.

2005—DAISY. Pure white.

2007—DANNY. Dark blue.

2006—CATHERINE. Salmon rose on cream ground. Above colors: Pkt. 25¢; oz. \$1.00.

1965—CUTHBERTSON'S FLORIBUNDA MIXED. Extremely vigorous, long stemmed, heat resistant; all the attributes of regular Cuthbertson's, but provides more bloom under comparable conditions, and greater perfection of flower form. Well grown, each long stem will bear 5-6 blooms. It replaces the older strain in our list. Pkt. 25¢; 1/2 oz. 60¢; oz. \$1.00; 1/4 lb. \$3.00.

1962—NEW GIANT HEAT RESISTANT MIXED. In originator's tests these, Giant Spencers, Earlies and Cuthbertson's were given identical care. These produced long stemmed flowers abundantly thru July into August, long after the others failed. Won't you try them? Pkt. 25¢; 1/2 oz. 75¢; oz. \$1.35.

A GOOD GARDENING MAGAZINE will give you the "Know how" to grow top quality flowers and we feel that two of the best are "POPULAR GARDENING" and "FLOWER GROWER." We also like, for helpful ideas on better living, better farming "FARM JOURNAL" and "AMERICAN POULTRY JOURNAL." For general interest, "THE SATURDAY EVENING POST." Order direct from publishers on enclosed special order blank.

Ginger Snaps

(Panorama)

These are the Famous F₂ Hybrid Outdoor Snapdragons Developed through years of Intensive Breeding Work by the Eminent Hybridist,* Mr. Charles Weddle.

There is no finer Snapdragon than the Ginger Snap, with the single exception of the magnificent new F₁ Hybrid Rocket shown and described on pages 2 and 3. (The Rocket is also, of course, a Charles Weddle development.)

Ginger Snap was developed specifically for the home gardener. Although the seed is inexpensive (considerably less than the still-rare Rocket seed), it comes in the widest range of beautiful colors, as listed below.

The plants build a heavy foundation before starting to bloom, thus they are a week or two later than Carrousel, below. The revelation comes when bloom begins. The plants branch from the base, providing a multitude of heavy cane-like 2½ ft. stems to hold the heavy spikes of extra large florets. They need no staking. The colors are very bright and clear with a glowing sheen to glisten in the sun. The plants are of uniform height, so look well in the border. Ginger Snaps take adverse weather in stride and the heavy textured flowers keep well. Cut all you want, for if kept picked, the plants bloom and improve until the hard freezes of late fall.

Ginger Snaps in your garden will be the envy of the neighborhood. Try some this year. They're in highest fashion.

Extra Early, Colorful

121A—CARROUSEL. F₂ Hybrid Snapdragon. Like a merry-go-round on a color wheel! All colors present in Snapdragons are represented in this fine mixture. Plants are extra early, fast growing and uniform in height at about 28" with flowers evenly spaced on long stems. We recommend using Carrousel in conjunction with Ginger Snaps to lengthen the season of bloom. Pkt. 25c; 1/16 oz. \$1.00; 1/8 oz. \$1.75.

* Mr. Weddle is eminent for his work on F₁ Hybrid Petunias, some of his most recent creations being Comanche, Paleface, Firedance, Prima Donna to mention but a few. He was the first American to discover the secret of producing All Double Petunias. See pg. 19.

Primrose Cultural Notes

Sow in pots or pans as early in the year as possible, water, cover with glass and place outdoors where the soil will be frozen. When milder weather sets in bring into gentle warmth and seeds will germinate freely. Freeze seeds in ice cubes for similar effect. Allow plenty of time—seeds are often tardy. Primulas need partial shade, rich, porous soil, and a mulch of pine needles or salt hay to keep roots cool—this seems the answer to growing them in warm climates. They like the east side of a hill, shelter from wind, good drainage.

0312 Park's Double Fibrous Begonia, Jewelite.

DOUBLE FLOWERED BEGONIAS

In 1957, we introduced the first seed grown Double Fibrous Begonia, Christmas Candle. Since then, we have been working hard to produce other colors. Our efforts are at last bearing fruit in the form of Blushing Baby and Jewelite. Every lover of house plants, every home greenhouse owner, will delight in these. The outdoor gardener will find there is nothing nicer for a shady border or bed. Park supplies you seed for all the plants you want at less than the cost of one ready grown plant. Double Fibrous Begonia Seeds are produced and offered exclusively by Park.

0311-BLUSHING BABY. The color of the double flowers is as soft and sweet as a baby's dimpled cheek. Of pure light pink, it is perfection itself against the waxy sheen of the medium green leaves. The seeds produce 75% full double flowering plants, 25% attractive singles. Pkt. 50c; 3 Pkts. \$1.35; 5 Pkts. \$2.00.

Jean Dean is shown below making the cross to produce F₁ Hybrid seeds of Jewelite Begonia.

Painstaking Care is Required

0311—Blushing Baby

0312—JEWELITE. The most pleasing color combinations in all the Floral Kingdom are found in the various Jewel-toned glowing hues produced from this F₁ Hybrid seed. Each glowing color is displayed to perfection against the waxy deep bronze-red of the "Jewel-Case" foliage. Colors range from deep scarlet red through rose-red, to light rose-pink, with some of the most beautiful rose shades ever seen in Begonias ranged between. Flower form varies from full-double like a rose, to Anemone type with a large crest where the petal color is interspersed with yellow, others are loosely double for a Carnation effect, while about 25% will be single. Every plant, including the singles, will have the harmonious dark foliage and lovely colors. We have yet to grow a plant from this seed which was not most attractive, and several have appeared so superior to any other in commerce, that we have named two of them to supply as vegetatively propagated plants. Pkt. 50c; 3 Pkts. \$1.35; 5 Pkts. \$2.00.

0307—PARK'S CHRISTMAS CANDLE. Fluffy balls of deep rose-red against the shiny emerald green of the waxy leaved, dwarf rounded plant give Christmas Candle universal appeal. In bloom constantly the year round, it is an exceptionally fine pot plant for your winter window, or in shady summer beds. Uniform, vigorous, floriferous F₁ Hybrid. Pkt. 50c; 3 Pkts. \$1.35; 5 Pkts. \$2.00.

GIANT DOUBLE GLOXINIAS

A well grown Double Gloxinia is one of the most spectacular of house plants, normally having about 20 blooms open, completely crowning the plant, and 20 or 25 additional buds ready to carry on the procession of bloom for several months. The extra petalage adds a lot of extra color area by comparison with single varieties; making for a far more colorful display.

For two years now, we have had a very concentrated breeding program on Double Gloxinias, in an effort, not only to produce additional colors, but also to overcome the difficulties which made seed production almost impossible. Among the thousands of Double Gloxinia plants we have grown, there appeared a few which would make seeds, and by working with these, we have been able to produce seed of:

0875—ROYAL RED. This seed produces 100% true to the bright luminous red color and better than 50% true to the full double characteristic. There is an interesting variation in the flower form, and the remaining plants are attractive, large flowered single red. 150 seeds \$1.00; 450 s. \$2.50. Now, by starting with the seeds, you can have all the Giant Double Red Gloxinias you want for less than the cost of one ready grown plant.

Double Gloxinia Plants

We have selected from a large lot of plants the finest doubles. These we propagated by an expensive vegetative method to insure you that the first named varieties ever offered would be 100% double, 100% true; the finest Double Gloxinias in the world by Park. Easly grown too.

You'll thrill to a brand new effect, elicit the admiration of your friends, for these are, of all Gloxinias, most beautiful.

TO CONTROL "DAMPING OFF"

"Damping Off" is a microscopic fungus growth which attacks the baby plants just as they emerge from the ground or while they are still small, and is the reason for many failures which are blamed on the seed, especially where very small seeds are concerned.

Sphagnum moss is a sterile antibiotic material in which fungi and bacteria cannot live. We have found sowing seed in Sphagnum a positive Damp-off control.

Where this is impractical, as with an outdoor bed or cold frame, spray the soil, just as the seedlings appear, with Semesan solution ($\frac{1}{2}$ oz. to gallon of water). We offer SEMESAN in $\frac{1}{4}$ lb. pkg. \$2.50. This is enough to spray 480 sq. ft.

Since 1868 it has been true:

"You Get the Best from Park"

Dear Friends:

We think there is nothing in all the world that moves the human spirit quite as subtly as a beautiful garden. Nothing else brings us so close to the wonders of God's creation.

From the delighted squeal of the youngest child to the reverent sigh of the aged, the masterworks which God created in flowers unfailingly find response in the human breast.

But while all of us find pleasure in the beauty of flowers, the greatest enjoyment is reserved for the gardener who sows the humble seed. The gardener who starts with the seed, in truth joins hands with Nature to bring God's miracles from the soil. He is the one whose cup of joy is inevitably filled to overflowing.

Our customers love flowers—else they wouldn't be our customers. And that love, which we share, gives us a common understanding most unique in the business world.

It is the basis of our customers' wonderful trust in us—which we cherish. Everything we do in our greenhouses, our trial grounds, our offices is aimed at justifying and fulfilling that trust.

Our dedication is to bring our customers the best selection

...and here are some Reasons Why:

A TRADITION of DEPENDABILITY for 92 years

GEORGE W. PARK began selling flower seeds in 1868, and through his catalogs and "Park's Floral Magazine," he served gardening enthusiasts all over America. He is now almost a legend in gardening circles.

Not long before his death in 1935, "Fortune Magazine" published an article about his business career. He was described as the "Bete Noire of the Seed Trade," because he insisted on selling his fine seeds at considerably less than other seed firms.

He truly believed and lived his creed "Your success and pleasure are more to Park than your money." This was his interpretation of the verse from Proverbs: "A good name is rather to be chosen than great riches, and loving favor rather than silver or gold."

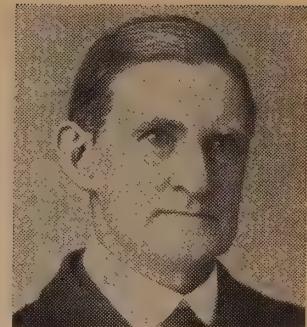

While this policy did not make him rich in worldly goods, he was rich in friends, for he felt each customer was his friend.

George W. Park left a great heritage to his sons George and William. Along with it went a great responsibility to serve the flower lovers of America with the finest flower seeds at reasonable prices, and in such variety that everyone would find his every wish in "Park's Flower Book."

His favorite prayer by John Henry Jowett expressed Geo. W. Park's faith in God, in his fellow men, and in the spiritual value of gardening.

GOD'S LOVE, AND BEAUTY

"My Father in Heaven, help me never to forget Thy Love to me. It comes with the light of the morning, and it remains with the light of the stars of the night. It looks up to me in the beauty of the flower. It shines upon me in the smile of a friend. All beautiful things are the gifts of Thy love. Help me to be thankful, and to link every beautiful thing with Thee. —Amen." JOHN HENRY JOWETT

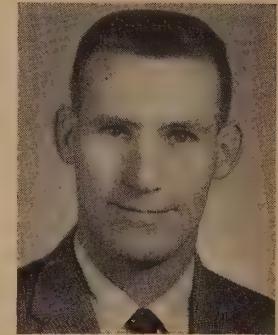

GEO. W. PARK

CONTINUING THE TRADITION

GEO. B. PARK

Geo. B. Park endeavors to make sure that the seeds packed under the Park label are the "Cream of the Crop"; that every worthwhile new variety, every good older one is presented to you accurately in "Park's Flower Book."

WILLIAM J. PARK

William J. Park endeavors to make sure that Park's service is superior in every way; that Park's catalog for commercial growers serves them well; that the breeding and trialing programs are well done, and that careful research enables us to maintain and improve the quality of the seeds we offer.

these trials, we make certain that the seeds supplied you under the Park label are grown by the specialist who is doing the best job on that particular variety. In this way we know that "You Get the Best from Park"

PARK'S TRIAL GARDENS

We feel that one of our most important services is represented by these trials, which are conducted solely to compare available "strains."

Each year about 2000 samples are grown. From planting to maturity, they are carefully evaluated. Trials in the north, mid-west and west are also evaluated. Based on the results of

Latest Developments, Highest Quality

Double Gloxinia Seed and Plant Production under the watchful, careful eye of Klaus Neubner, Park plant breeder and production supervisor. New varieties and maintenance of quality require constant skillful control.

PARK'S GREENHOUSES

Our greenhouses are modern in every respect. Automatic heating, ventilation, cooling and watering assures plants of the very best quality for you. Packing and shipping room is an integral part for quick efficient handling.

Three most important functions of our greenhouses are: The germination tests* conducted to assure the vitality of our seeds; the trials of window garden and greenhouse seed strains; the breeding program which is carried on in them.

*Germination tests are also made in seed department germinators.

THE PARK ORGANIZATION

Our organization, built over the years since 1868, is highly efficient and stands ready to serve your every gardening wish.

We'd like to take you through our plant—to show you how carefully the seeds are stored; how conscientious are our co-workers; and the modern methods by which your orders are handled.

Perhaps the most important reason we can give such prompt and accurate service is that the Park staff is made up of folks who are interested, not in just a job, but in giving a service. They take pride in getting your order out the day it comes in. They're proud to send the good seed we have for you, and they feel a warm bond of friendship for Park customers. This is part of the tradition.

Packing 3000 Varieties takes Experience

They're hand packed with utmost care, befitting the finest flower seeds grown, under the competent guidance of Myrtle Stevens, with Park since 1933. Ella Vines is shown packeting flower seeds.

PARK BRINGS YOU THE WORLD'S FINEST FLOWER SEEDS

We are highly honored and humbled by the recognition we received this past year. The Men's Garden Clubs of America presented us with the certificate of Merit for: "The introduction of outstanding plants over a period of years."

Many of the seeds we sell come from careful European Floriculturalists whose work is a lifetime labor of love. This past year William Park visited many of these.

The Cessna 195 "Parkspeed III" helps in our quest for new varieties. It takes us all over America to evaluate trial gardens, visit our growers, check on the crops, and to observe new things in breeders' work shops. We see how our new flowers will perform in all sections of the country before we introduce them.

INDEX, GERMINATION and CULTURE GUIDE

When sowing seeds it is always best to divide the packets and sow at different times. Note the time and give good care until the plants have had time to appear. The following table gives the time normally required for germination of each variety of seeds. This time may vary as much as 25% either way. Do not condemn seeds until you have given them at least two or three trials. Those marked z or having the dagger (†) beside them may lie dormant for a year or more. The other tables are self explanatory, and while they are somewhat complicated, do give a great deal of information about each of the hundreds of species listed.

 It gives me such a thrill to be able to have seed
 germinate quickly that I had failed on just planting
 the ordinary way. Truly I am happy with the re-

Giant Dahlias

Are easily grown from Park's strong tubers

THE VARIETIES LISTED here are selected with painstaking care from the thousands of varieties in cultivation. Those listed on these pages are the best growers, freest bloomers, and those listed as mammoth will give the largest flowers Dahlias can produce. Growing show dahlias does take careful disbudding, and proper care.

KEEPING CUT DAHLIAS. Strip the foliage except at the top, recut the stem and immerse in water as hot as the hand will bear. When water cools transfer the Dahlias to cold water and place in the cellar overnight. Treated thus they will keep for several days and increase in size.

DAHLIA CULTURE. This subject including how to prevent disease and get rid of insect pests is covered fully in "The Gardener's Handbook." For bedding effects plant on or a week before frostproof date. For exhibition blooms plant late (May and June). Late planting brings the plants into bloom during late summer and fall when the cool temperatures promote better blooms.

EXHIBITION DAHLIAS. Exhibition Dahlias and satisfactory tubers can not be produced in the same hill. If you want 12 inch flowers, go after them with fertilizer, water and disbudding.
